IBX SmartView 2020.4

IBX SmartView 2020.4 release delivers a set of new features enhancing the IBX SmartView capabilities.

AWS IoT Core integration with IBX SmartView data

This release introduces IBX SmartView data integration with AWS IoT Core that supports IoT devices and equipment for Data Center applications. This will push near-real-time IBX SmartView data to IoT Core accounts. Users with AWS cloud presence will be able to easily retrieve such data through this integration.

This release also includes updates to the below API to access additional functionalities:

Streaming API V2

In this release, we present a new version to the near-real-time API interface that will make the API output more human-readable. This version provides clear data point definitions and consistency to their business definitions.
