

## What's New 'Cliff Notes'

### Colocation 2021.1

Colocation 2021.1 release delivers a set of new features that enhances the capabilities of Space and Power.

### Secure Cabinet Express

Secure Cabinet Express is a new product in the Secure Cabinet line of products that uses kVA power with selectable draw cap. This product builds upon Equinix's proven Secure Cabinet product line that enables redundant power delivery and SLAs through our industry-leading uptime track record. It is globally available in select markets.

Each Secure Cabinet product:

- follows a standardized physical platform (cabinet, power, interconnection)
- supports a wide range of equipment sizes and power requirements
- provides a simplified ordering experience

### Hyperscale and XScale Data Centers

Hyperscale data centers are characterized by tens of thousands of square meters of floor space, filled with thousands of computing and storage systems, and massive networking capacity.

XScale data centers provide hyperscale capacity and control options through an Equinix joint venture. Joined with partner data centers, they offer Equinix Interconnection and Edge services while increasing connectivity speeds.

To access our Hyperscale XScale data centers, see –

## **Rooftop Space in Data Hall**

Rooftop Space reserves a portion of the data center roof where you can install (or we install on their behalf) a platform to support your antenna needs for timing services (GPS), or direct communication (microwave).
