

## What's New 'Cliff Notes'

### Equinix Precision Time 2021.2

With Equinix Precision Time 2021.2, you can update and resubmit service configurations through the Retry Services capability in the Precision Time Portal.

#### Retry Configuration Using Precision Time Portal

Equinix Precision Time now enables you to make changes to service instances and then resubmit the configurations, for either NTP or PTP protocols. Using the new Retry feature, you can edit details such as the service name, location, and IP addresses of your primary and secondary time masters. You can also update the service tier and review pricing changes for service instances that were ordered from the Precision Time Portal.
