

What's New 'Cliff Notes'

Equinix Precision Time 2021.3

Equinix Precision Time 2021.3 adds a notification in the UI about netmask support limits for NTP and PTP clients on Standard and Enterprise tiers. Also, Precision Time subscriptions are now available in Brazil, where NTP and PTP protocols are supported from several locations.

NTP and PTP Tier Support for Clients

When configuring and provisioning a Precision Time subscription, the service tier and protocol combination that you select determines the number of client devices that can be supported. The netmask value used for your service tier manages, monitors, and sets limits on the number of clients.

If the Network Mask entered in the UI exceeds the allowed number of clients, you'll see a warning message with a suggested Network Mask Value. The number of clients supported by each protocol and tier combination is:

- **NTP with Standard tier** - Supports approximately 1,000 NTP clients
- **NTP with Enterprise tier** - Supports approximately 2,000 NTP clients
- **PTP with Standard tier** - Supports approximately 20 PTP clients
- **PTP with Enterprise tier** - Supports approximately 100 PTP clients

Edge Precision Time in Brazil

Precision Time subscriptions are now available in Brazil, with NTP protocol support provided from both the NY and SV locations. PTP support for Brazil, however, is provided only from NY.
