

## What's New 'Cliff Notes'

### SmartKey 2020.2

SmartKey 2020.2 delivers a set of new features enhancing SmartKey capabilities.

#### Key Custodian Feature

This feature adds enhanced security to the import/export of key components. A Key Custodian policy allows an Account Member or Account Administrator to participate as Key Custodian for a group. Key Custodian policy is required in order to import/export key components.

#### Service Accounts

Service Accounts are a new kind of account that acts like an app with access to account-level permissions. This gives the app tied to the service account permissions to add new apps or groups. You will then be able to automate the creation of new apps and groups programmatically.

#### Key justification for Google service account

This release adds Key access justifications (KAJ) to the Google Service account. KAJs are part of the GCP External KMS service using SmartKey.
