

What's New 'Cliff Notes'

IAM 2021.2

Equinix IAM release 2021.2 is available in a limited release for Network Edge Pilot Program customers.

IAM streamlines the management of existing Equinix products, such as Equinix Fabric and Equinix Network Edge. Using Equinix IAM, you can create and manage Equinix assets, organizations, permissions, projects, and user roles from within a centralized console.

Customer Resource Hierarchy (CRH) Enhancements

Users of Equinix IAM can use the Equinix CRH and share resources between applications, networks, organizations, and projects. A more responsive architecture offers increased control over your Equinix product organizations and users.

Decentralized Billing and Users

Billing accounts and users are no longer owned by your Customer Organization. They are now separate entities, allowing a greater degree of flexibility.

Advanced Centralized Product Management

Equinix IAM enables you to manage access to Equinix products, services, and resources securely. Using IAM, you can create and manage your Equinix organizations, permissions, projects, resources, roles, and users.

IAM Pilot Program

Selected Network Edge and Fabric users will be the first to use the new capabilities of the Equinix IAM. See [About Identity and Access Management](#).
