

What's New 'Cliff Notes'

IAM 2021.4

Equinix IAM release 2021.4 is available in a limited release for Equinix Fabric and Network Edge Pilot Program customers.

Equinix Console

This release is completely re-engineered, and now uses the Equinix Customer Portal (ECP) to enable direct access to current Equinix products (such as Equinix Fabric and Equinix Network Edge).

Equinix IAM enables the creation and management of Equinix resources, roles, organizations, permissions, projects, and users from within a centralized Equinix Console. Resources such as billing accounts and virtual devices are now shared resources, rather than being dedicated to a singular Equinix product.

See [About IAM](#).

New IAM User Experience

The IAM Dashboards and related IAM functionality are now separate options in the IAM menu. Now you can select organization and project dashboards separately from Access Management (AM) options, including:

- Resources
- Users
- Roles
- Billing (Billing Accounts)

See [Dashboards](#) and [Resources](#).

Context Selector

In the Equinix Console, the Context Selector is accessible from the IAM menu. The Context Selector allows you to directly select any organization, project, or virtual device to work at your chosen hierarchy level.

Billing Account and User Creation

Billing accounts and users are now created in the Equinix Customer Portal, and are automatically migrated to IAM.

See [Billing Accounts](#) and [Migration](#).

IAM Pilot Program

Selected Equinix Fabric and Network Edge users are participating in the IAM pilot program, and the effort is being extended to additional Equinix users.
