

What's New 'Cliff Notes'

Cross Connects 2020.4

Cross Connects 2020.4 provides increased provisioning speed, increased connectivity options, and other new features.

Faster Provisioning

- The Equinix Customer Portal (ECP) now leverages full cross connect automation.
- IBX Ops interaction has been removed from the delivery of cross connects.

Port Designation in Precabled IBXs

- Customers can choose any port on their patch panel for Cross Connect provisioning.
- This release encourages adoption of Equinix managed panels.
- The visual panel display that is available in ECP provides easy customer consumption.

Fiber Connect Expansion in HE6/7-HEA-A Route

- Geo expansion to increase connectivity options is now available in 3rd party sites.
