

What's New 'Cliff Notes'

ECX Fabric 2020.2

Equinix Cloud Exchange Fabric release 2020.2 delivers a set of new features enhancing the ECX Fabric capabilities.

Permission Model Expansion

This feature is further expanded to manage user privileges for ECX Fabric Virtual Resources and Network Edge Virtual Resources. This release extends Permission model to manage user privileges for Network Edge Virtual Devices and ECX IP Blocks.

Simplify Layer 3 Create Connection

This feature simplifies the Create connection order flow for customers ordering Virtual Connections to Layer 3 Service Profiles. The simplified Create Connection process makes it easier for you to connect to Layer 3 Service Profiles (service providers) that are important to your digital supply chain.

Alibaba Express Connect API Integration

This feature allows automated order flow with simplified ordering for customers. You can order Alibaba Express Connect enabled through an API integration between ECX Fabric Portal and Alibaba Cloud Portal.

New User Creation for ECX Fabric Portal

This feature allows a new user to create login credentials in order to use the ECX Fabric portal.
