

What's New 'Cliff Notes'

Equinix Fabric 2021.1

Equinix Fabric 2021.1 includes a new visualization tool for users, enhancements to the Fabric to non-Fabric connection process, and improvements to the service profile workflow. Equinix Fabric 2021.1 is available February 15, 2021.

Visualization of Virtual Connection Utilization

You can now view service-level traffic statistics for your virtual connections to help you determine the impact of each individual service. You can view graphs for average and maximum inbound and outbound traffic. Up to three months of traffic history is available.

Equinix Fabric to Non-Fabric Connections

Non-Fabric Equinix customers can now forward connection invitations, delegating the ability to accept the invitation to another user in their organization. Additionally, the Equinix Fabric customer who created the connection invitation can forward that invitation to an entirely different user if the first user declined the invite.

Service Profile Harmonization

Enhancements to the service profile creation process further highlight the differences between public and private service profiles. Additionally, you can choose to have your service profiles displayed on external websites to enhance “discoverability.”
