

## FUNCTIONAL LEARNING DEMO

# New Connections Inventory

Equinix Fabric 2021.4

Priyanka Balaji, Senior Associate Product Manager

Hi, I'm **Priyanka Balaji** and I'm a Senior Associate Product Manager at Equinix. In this video, I'm going to take you through the New Connections Inventory for Layer 2 connections. Please note that the Legacy Connections Inventory is still available to use till February 2022.

I'm logged into the Equinix Fabric Portal and here is the old Connections Inventory page. You can access the new Inventory by clicking on the highlighted hyperlink here, or you can click on the connections drop-down and select Connections Inventory.

The new Connections Inventory offers a Singular view of all virtual connections, with advanced filtering and search capabilities for easier accessibility. As we scroll down, there are several options to locate an existing incoming or outgoing Layer 2 connection. If you have the name of the connection handy, you can run a simple search by typing in this text field. You can also search by categories such as Connection and Company Name, Authentication Key, Access Point, VLAN, UUID and Service Token from this drop-down.

Custom filters can then be used to adjust the table below by Connection Status, Origin and Destination Location and Access Point, and Connection type. Check boxes under 'Other' also provide the option to filter redundant, remote or connections that use a service token. Please note that the filters can be cleared at any given point by clicking on either the individual Clear Filter options or the Clear all Filters option here. The list of connections and associated attributes can be downloaded using the Export .csv file option. You can also edit the columns listed by default by clicking on this icon here to show/hide columns and customize your view. The number of connections per page can also be customized from this drop-down.

That concludes this demo, thanks for watching!
