

What's New 'Deep Dives'

Equinix Fabric 2022.1

'Deep Dives' offer more detailed information on new and enhanced features for this release.

Connections Inventory

Customize the information columns that display in your list view by clicking the settings icon and selecting or deselecting columns.

Search

Use the search field to narrow your connection list. The drop-down menu allows you to choose specific categories.

- **Connection Name** – Use to search for connections with a specific connection name.
- **Company Name** – Use to search for connections with a specific company name.
- **Access Point Name** – Use to search for connections with a specific access point name.
- **VLAN Tagging** – Use to search for connections with a specific VLAN.
- **UUID** – Use to search for connections with a specific UUID.
- **Service Token** – Use to search for connections that require a service token.

Filtering

Use the advanced filter options to narrow your search to specific criteria.

- **Equinix Status** – Use the drop-down to select a status. Click on a status to delete it from your search.
- **Provider Status** – Use the drop-down to select a status. Click on a status to delete it from your search.
- **Type** – Select a connection type (**Incoming**, **Internal**, or **Outgoing**).
- **Access Point** – Select **Origin** or **Destination**.
- **Location** – Select an available origin location or destination location.
- **Other** – Select **Remote**.

Connection Details

Click on a connection in your **Connections Inventory** to view the connection details.

The details are divided into four tabs:

- **Overview** – Provides basic information about your connection.
- **Origin** – Provides information about your connection origin.
- **Destination** – Provides information about your connection destination.
- **Connection Utilization** – Provides connection traffic statistics.

View

Change the way your **Connection Inventory** displays using the view buttons.

Click the tile button to view each connection in a separate tile.

Click the list button to view a list of connections.

Virtual Connection Migration

To migrate your connection to a different port:

1. Log in to the [Equinix Fabric portal](#).
2. From the **Connections** menu, select **Connection Inventory**.
3. Click the connection you want to migrate. The Connection details will display.
4. Click **Origin**.
5. In the **Port Name** section, click **Edit**.
6. In the drop-down, select a different port.
7. Select **I have verified the port capacity and VLAN availability on the new port. I will perform the necessary changes on my end.**
8. Click **Confirm**.

A message will display at the top of the page indicating the connection was successfully migrated.

You will also receive an email confirming the migration.
