

What's New 'Cliff Notes'

Equinix Connect 2020.3

Equinix Connect 2020.3 delivers a set of new features which enhance Equinix Connect capabilities.

Equinix Connect 100G Ports

This release adds support for Equinix Connect 100G ports, provided on a metro-by-metro basis. When this capability is enabled, the tools for ordering and sales collateral are also updated.

10G Link Aggregation Group (LAG)

Link Aggregation Group (LAG) is supported on 10G Equinix Connect ports. Up to 10 ports can exist within one LAG, subject to metro availability (check with your sales representative for further information).

Your equipment must support Link Aggregation Control Protocol (LACP). The ports within this group can't include Equinix Connect ports across different metros. Primary and secondary ports must have the same number ports in dual-homed configurations.
