

What's New 'Cliff Notes'

Internet Exchange 2020.1

Equinix Internet Exchange 2020.1 delivers a new web interface for improved presentation of the Internet Exchange features, and access to additional support resources.

Dashboard

This feature offers an instant view of the three most utilized ports on the customer's Internet Exchange portal. The new main menu provides a more intuitive way to view port traffic status, peering details, metro traffic and performance statistics, peer search capabilities, and resources of supporting documentation and videos.

Port and Peer

Customers can view their port traffic statistics at the port level, or aggregated at the IBX, Metro, or Region level.

Metro Statistics

This feature provides the user with a map showing all the metro locations that support the Internet Exchange platform, along with their aggregate traffic data.

Peering Discovery

This enhanced set of features is the anchor for this service. Users can easily view all participants on the global peering platform, filtered by location and organization. In addition to bi-lateral peering, customers can join the Multi-Lateral Peering Exchange located in their metro.

Resources

Expanded resources include links to relevant documentation and videos associated with peering and the Internet Exchange service. This helps the customer get started, order, and expand their service.
