

What's New 'Cliff Notes'

Internet Exchange 2020.1

Equinix Internet Exchange 2020.1 delivers a new web interface with improved presentation of the Internet Exchange features with enhanced capabilities to help consume and support services.

Internet Exchange 2020.1 is available as of June 30, 2020.

Dashboard

This feature offers an instant view of three most utilized ports on the IX portal. The new main menu gives the user a more intuitive way to view their port traffic status, peering details, metro traffic and performance statistics, peer search capabilities, and a resource of supporting documentation and videos.

Port and Peer

Customers can view their port traffic statistics at the port level, or aggregated at the IBX, Metro or Region level.

Metro Statistics

This feature provides the user with a map showing all the metro locations that support the IX platform and aggregate traffic data.

Peering Discovery

This enhanced set of features is the anchor for this service. User can easily view all participants on the global peering platform with the ability to filter location and organization. In addition to bi-lateral peering, a customer may choose to join the Multi-Lateral Peering Exchange at the metro where they are located.

Resources

Resources offer relevant documentation, links and videos associated with peering and the Equinix Internet Exchange service. This helps the customer get started, order and expand their service.
