

## What's New 'Cliff Notes'

### Network Edge 2020.1 (formerly 1.5)

Network Edge Release 2020.1 delivers new features to continue increasing the breadth of Network Edge capabilities.

#### **Customized ECX Remote Port Pricing for NE Users Ordering BYOC**

In future, when NE users add BYOC (bring your own connection), they are charged per the standard rate, whether the ECX port is remote or not.

#### **Allowing BYOC for Sub-account Users with Connect to Myself Option**

The sub-account users can connect to an NSP through ECX port assigned to them by the reseller or connect to an NSP using our virtual connection. This new feature will help sub-account users opt for BYOC which they cannot do today.

#### **Palo Alto VM Subscription**

We now offer Palo Alto subscription licenses making it easier for customers to buy Palo Alto devices.

#### **Supportability Enhancements**

Network Edge customers ordering HA devices will be able to add a host-name for their secondary devices for easy identification.
