

What's New 'Cliff Notes'

Network Edge 2020.2

Network Edge Release 2020.2 delivers new features to continue increasing the breadth of Network Edge (NE) capabilities.

Equinix Cloud Exchange (ECX) Fabric Platform Permissions for Network Edge

Administrators have the ability to grant or revoke access to specific NE functions on the ECX Fabric Portal.

Expanded Layer 3 Capabilities

Layer 3 connections can now be enabled for virtual devices.

- VPN Tunnels - The VPN setup process has been enhanced to make it more intuitive and representative of the network design.
- Whitelist Domains - Domains can be whitelisted, making it more convenient for administrators to look up domains and add subnets.

VMWare SD-WAN VeloCloud Devices

Customers can now create and operate VMWare VeloCloud Edge instances from Equinix Marketplace. Bring your own license (BYOL) to instantiate either a 2-core, 4-core, or 8-core instance.

Fortigate Subscription Licensing

Fortinet Firewall and SD-WAN subscription licenses are now available through the Equinix Marketplace.

Improved Device Sorting

List view, sorting, and filtering is now enabled for NE virtual devices.

Delete Draft Devices

This new functionality provides the ability to delete any draft device created by a user in the customer organization.
