

## What's New 'Cliff Notes'

### Network Edge 2021.2

Equinix Network Edge 2021.2 delivers enhancements to the BYOC workflow, a device configuration backup feature, the ability to request permissions, and a diverse compute feature that adds flexibility to your device deployment. Network Edge 2021.2 is available May 10, 2021.

#### BYOC Enhancements

We've added enhancements to the Bring Your Own Connection workflow to make it easier for customers to set up their own connections. These enhancements include a prerequisite checklist to make sure you're ready to create your order, and improvements to the status tracker.

#### Request Permissions

When a customer finds that they don't have the proper permissions to perform an operation, they can now use the **Request Access** function to go directly to the Equinix Customer Portal and request permissions from their Master Administrator.

#### Configuration Backup

Customers with active devices can take periodic snapshots of their device configuration in order to track changes and updates to their devices in the event of a failure. Up to 30 backup files can be created and stored.

#### Restore Configuration

Customers with at least one configuration backup can load the backup to their device in order to restore the device to a previous state.

## Diverse Compute

Customers now have more flexibility when deploying Network Edge devices and architecting fault-tolerant designs. A customer can create a new device which has a diverse compute from an existing single Network Edge device.
