

What's New 'Cliff Notes'

Network Edge 2021.3

Equinix Network Edge 2021.3 delivers new Cisco devices available in the marketplace, extra-large device sizes for Check Point, VMWare, Fortinet and Palo Alto, Fortinet SD-WAN cluster deployment, and the ability to apply one ACL template to multiple devices.

Network Edge 2021.3 is available August 16, 2021.

New Cisco Devices

Cisco's Adaptive Security Appliance and Cisco's Firepower Threat Defense are now available in the Equinix Marketplace.

XL Device Sizes Added

We've added larger sizes to some available devices. You can now create extra-large devices for Check Point, VMWare, Fortinet (Firewall and SD-WAN), and Palo Alto Networks (Firewall).

One ACL Template for Multiple Devices

Access Management functionality has been improved to allow you to apply a single ACL template to multiple devices. You no longer need a separate template for each individual device.

Deploy a Fortinet SD-WAN Cluster

Fortinet SD-WAN devices now support clustering. Active/Standby deployments create more fault-tolerant solutions when needed for high availability.
