

What's New 'Cliff Notes'

Network Edge 2022.1

This release includes integration of Cisco's SDCI with Azure and Google Cloud Platform, and a new virtual connection migration support option.

Network Edge 2022.1 is available February 14, 2022.

Cisco SDCI Integration with Azure and GCP

We've integrated Azure and Google Cloud Platform with Cisco's Software Defined Cloud Interconnect (SDCI). Now you can create connections to Azure and GCP with your SD-WAN orchestrator.

Virtual Connection Migration

The new **Connection Migration** option available when you submit a support ticket allows you to have your connections migrated from one device to another. This new option allows you to upgrade your device or create a new device without needing to create new connections.
