

## What's New 'Cliff Notes'

### Marketplace 2022.4.1

This release introduces enhancement that raises the visibility of non-standard product availability in Marketplace.

### New “Limited Availability” Indicator in Product Availability Chart and IBX Connections

A new indicator “Limited availability. Contact your Account Manager for more information.” is now added to the Product Availability Chart. This indicator will only display when all available speeds in a specific IBX have limited availability.

With this release, the status of the Product Availability Chart now include:

- Available to order online
- Unavailable
- Limited availability. Contact your Account Manager for more information.

Additionally, on IBX level, in the ‘Connections’ area, it will indicate that certain speeds cannot be ordered online for selected products. For example: “100 Gbps limited availability, contact your Account Manager to order.”

This new indicator lets you know that while a product is available, there are qualifications and can only be ordered via special request from Equinix Account Managers.

### Updated Display of Port Speeds for Fabric, Internet Exchange, Metro Connect and Equinix Internet Access

Port speeds for Fabric, Internet Exchange (IX), Metro Connect and Equinix Internet Access (EIA) are displayed. The format of the speed has been updated: from 10G to 10Gbps. For Fabric, IX and EIA, the display of port speeds is new.

## Virtual Connect Bandwidth for Fabric

In the 'IBX connection check' area, we show available virtual connection bandwidth for Fabric under Virtual Connections. For example: "Equinix Fabric (**EVPL, EPL**) (**50 Mbps - 10 Gbps**)"
